In Jan and Feb of 2004 we planted 140 coast live oak trees at three locations in north county. Ten years later, in spite of vandalism, carelessness and the infinite complexity of Mother Nature, 27 remain. This tree, at Oak Riparian Park in Oceanside, is the most robust of the survivors. Oaks can be slow growing trees and most of its siblings are still barely waist high. But this beauty is over 15 feet tall and well on its way to a long and healthy life and helping to ensure that future generations will still know the shade of an oak tree along Calavera Creek.
